(54) METHOD AND DEVICE FOR JUDGING NOISE ANALYTIC RESULT OF TRANSMISSION LINE

(57)Abstract:

PROBLEM TO BE SOLVED: To facilitate the judging operation of the signal waveform of a noise analytic result in the noise analytic operation of a signal waveform flowing through the transmission line of a printed board.

SOLUTION: An input device part 110 inputs a criterion to a signal waveform criterion storing part 105 and a noise analyzing object signal to a noise analyzing object signal editing part 111. Then, the editing part 111 fetches connection information from a connection information file 112 and sends connection information of analyzing object signal, a using part type, etc., to a judging point searching part 106 and a noise analytic part 102. The

analytic part 102 analyzes noise from wiring layout information and analyzing object signal information. An analytic result judging part 107 judges the signal waveform of a judging point searched from the signal waveform of the noise analytic result by the searching part 106 by a signal waveform judging criterion. The judging result is stored in a file 108, error contents are displayed on an error contents display part 109 and the judging result is outputted to a noise analytic judging result gathering table 113.

LEGAL STATUS

[Date of request for examination] 11.08.1999

[Date of sending the examiner's decision of rejection] 07.08.2001

[Kind of final disposal of application other than the examiner's decision of rejection or application converted registration]

[Date of final disposal for application]

[Patent number]

[Date of registration]

[Number of appeal against examiner's decision of rejection]

[Date of requesting appeal against examiner's decision of rejection]

[Date of extinction of right]
